

Task Delegation Decision Guide

AI Literacy for the Modern Workforce

SINGLE-PAGE REFERENCE
FOUR-QUESTION DECISION FLOW

BEFORE YOU DELEGATE
— *walk the four questions*

Use this guide before delegating a task to AI. Walk through four questions in sequence. Each question either routes you to a recommendation or advances you to the next filter.

NOTE • Q4 If Q4 = No but the task still benefits from AI acceleration, use AI-assisted with mandatory peer review from someone with the domain expertise.

OUTCOME DEFINITIONS		
FULLY DELEGABLE	AI-ASSISTED WITH REVIEW	HUMAN-ONLY
AI produces the output; you spot-check the result.	AI produces a draft or structure; you direct, evaluate, and revise using your expertise.	You produce the output. AI may assist with sub-components, but the core judgment stays with you.
EXAMPLES Data compilation from known sources, formatting, proofreading, standard translations, template population.	EXAMPLES Comparative analysis with verified inputs, first-draft summaries you'll review, structural scaffolding.	EXAMPLES Strategic recommendations, causal interpretation, tasks depending on unrecorded or proprietary information.

ONE TASK,
MULTIPLE COMPONENTS
— *apply per component*

Most workplace tasks are bundles of sub-tasks with different risk profiles. Apply this guide per component, not per deliverable. A quarterly business review might include data compilation **FULLY DELEGABLE**, trend narrative **AI-ASSISTED**, and strategic recommendations **HUMAN-ONLY**.

When you decompose a task into separate components, a compilation step followed by a dedicated human verification step can be fully delegated even when the overall deliverable carries significant stakes, because the verification step absorbs the risk. If compilation and verification are not separated, the combined task routes through the full flowchart at the higher stakes level.
