

Organizational AI Use Policy Starter

AI Literacy for the Modern Workforce

SINGLE-PAGE REFERENCE
CONVERSATION SCAFFOLD

This is a conversation starter, not a policy.

69%
of professionals who use AI productively conceal it from colleagues.

This scaffold helps you initiate a conversation about shared AI use norms. You are proposing shared standards, not asking for permission.

HOW TO USE

1 Review the four areas below

→

2 Draft your "Your input" answers

→

3 Bring to a 1:1 or team meeting

→

4 Use as conversation structure, not a form

●●●● FOUR DISCUSSION AREAS

01 DELEGATION NORMS

What tasks are appropriate for AI use on this team?

Appropriate tasks	Which types benefit from AI? (drafting, data compilation, research, brainstorming, formatting...)
Off-limits tasks	Where should AI not be used? (client-confidential, regulatory, personnel decisions...)
Data boundaries	What info can/cannot be shared with AI tools? (proprietary, client, internal strategy...)
Tool selection	Which AI tools are approved or preferred?

YOUR INPUT

I currently use AI for _____. I avoid it for _____. I'd like clarity on _____.

02 DISCLOSURE NORMS

What transparency is expected?

Internal work	What disclosure for internal deliverables? (None? Verbal? Written?)
Client-facing	What disclosure for external or client-facing deliverables?
Threshold	Stakes level below which disclosure isn't necessary?
Format	Diligence statement, footnote, verbal note, or team documentation?

YOUR INPUT

I currently disclose by _____. I'm unsure about disclosure for _____.

03 VERIFICATION NORMS

What review standard applies?

Minimum standard	What verification before sharing? (spot-check? full review? peer review?)
High-stakes work	Deliverable types needing extra verification? (client-facing, financial, legal)
Accountability	Who's accountable for errors — delegator, reviewer, or both?
Escalation	If an error reaches a client or stakeholder, how is that handled?

YOUR INPUT

I currently verify by _____. I'd like agreement on the standard for _____.

04 DOCUMENTATION NORMS

How is AI use recorded on this team?

Team visibility	Track at individual, project, or team level?
Learning sharing	How do members share effective practices? (channel, retros, docs)
Improvement	How to evaluate whether AI improves quality, not just speed?

YOUR INPUT

I'd find it helpful if our team _____ to share what's working.

STARTING THE CONVERSATION

If raising AI norms feels uncomfortable, that's the concealment dynamic. Three framing options:

FRAME 01
Process improvement
"I've been thinking about how we could be more consistent in how we use AI tools. I put together some discussion points — could we spend 10 minutes in our next 1:1?"

FRAME 02
Quality standard
"I want to make sure my AI-assisted work meets the team's standards. Can we align on what verification and disclosure look like for our deliverables?"

FRAME 03
Team learning
"I think several of us are using AI but figuring it out independently. Would it be useful to agree on shared practices so we can learn from each other?"

The goal is to replace private, uncoordinated AI use with visible, accountable team practice, not to create bureaucracy.
